Environment

FreeSpace Path Loss (distance)

$$RSSI = P_r = P_t + G_T + G_r - (20 \cdot \log_{10}(d \cdot f) - 147.55 - Loss_{noises})$$

- P_r, P_t : Power of transmit and receive signal
- G_T, G_r : Antenna Gain of Transmitter and Receiver
- d : Distance between receiver and transmitter
- f : Communication Frequency
- -147.55 : Reference value of free distance path loss at 1 MHz and 1 meter
- $Loss_{noises}$: Path losses from noise and obstacles
